

วิธีแก้ปัญหาในกรณีที่ตั้งค่า IPv4 ไม่ได้ (IP Address for Ethernet)

1. Search > CMD (Run as administrator)

- Command: **netsh interface ipv4 show inter** (look for **Idx** and take a number for next step)
- Command: **netsh interface ipv4 set interface **Idx** dadtransmits=0 store=persistent**

2. Run (Windows+R) > services.msc

Find: **DHCP Client** and disable

Then restart your computer and get open DHCP Client again.
